

Início

```
graph TD; A([Início]) --> B[Obter incidentes resolvidos]; B --> C[Calcular tempo total de resolução]; C --> D[Calcular media MTTR]; D --> E[Retornar resultado]; E --> F([Fim]);
```

This flowchart illustrates the process of calculating the Mean Time To Resolve (MTTR). It begins with an oval node labeled 'Início' (Start). An arrow points down to a rectangular process node 'Obter incidentes resolvidos' (Get resolved incidents). Another arrow points down to a second rectangular process node 'Calcular tempo total de resolução' (Calculate total resolution time). A third arrow points down to a third rectangular process node 'Calcular media MTTR' (Calculate average MTTR). A fourth arrow points down to a fourth rectangular process node 'Retornar resultado' (Return result). Finally, an arrow points down to an oval node labeled 'Fim' (End).

Obter incidentes resolvidos

Calcular tempo total de
resolução

Calcular media MTTR

Retornar resultado
